EDUCATION

B.S. in Computer Science and Engineering | UCLA, Los Angeles, CA

EXPECTED MAY 2021

- Introduction to Computer Science I/II, Introduction to Computer Organization, Software Construction Laboratory, Linear Algebra and Applications, Differential Equations, Physics for Scientists and Engineers: Mechanics, Introduction to Linguistics, Calculus of Several Variables

EXTRACURRICULAR

Vision Director / Developer | Unmanned Aerial Systems at UCLA

2017 – CURRENT

- Built adaptive load balancing, distributed computer vision pipeline with Socket.IO
- Improved Computer Vision training image generation algorithm with OpenCV, Keras, and Tensorflow
- Built real-time drone telemetry analytics interface using ReactJS and ChartJS

Software and Electronics Lead | Aluminati Robotics (FTC Team #6325)

2014 – 2017

- Implemented improved autonomous robot control algorithms with Java
- Revamped sensor suite to include ultrasonic rangefinders, gyroscopes, accelerometers, motor encoders and phototransistors
- Progressed LA Regionals Tournament

PROJECTS

Improved Class Planner 2017

- Implemented automated web scraping algorithm with NodeJS, Express and Cheerio

Simple Universal Web Remote 2017

- Built a easy to use remote (for elderly) to control multiple video streaming devices using a NodeMCU (ESP8266) module to send JSON/RPC requests to Kodi

"Community" Virtual Board Game 2013

- Built a generic clone of Monopoly with Java Swing interface with an extensible platform to support a variety of different types of boards

Cryptography/Cryptanalysis 2013

- Implemented various substitution and transposition ciphers in Java
- Implemented basic letter and word frequency analysis for breaking ciphers in Java
- Can be used as a library or through a command line interface
